APPENDIX

Data Sources

The principal source of information for the tables in *International Debt Report 2025* is the International Debt Statistics database, which is based on reports to the World Bank through the World Bank's Debtor Reporting System (DRS) from member countries that have received either International Bank for Reconstruction and Development loans or International Development Association credits. The DRS has its origin in the World Bank's need to monitor and assess the financial position of its borrowers. Since 1951, borrowers have been required to provide statistics on their public external debt and private sector debt that benefit from a public guarantee. Reporting countries submit reports on the annual status, transactions, and terms of the long-term external debt of public agencies and that of private ones guaranteed by a public agency in the debtor country. The DRS maintains these records on a loan-by-loan basis. In 1973, coverage of the DRS was expanded to include private sector nonguaranteed borrowing; however, for this category of debt, data are provided by borrowers in aggregate rather than loan by loan.

Data submitted to the DRS are processed in the World Bank External Debt system, along with additional information received from the African Development Bank, the Asian Development Bank, the European Bank for Reconstruction and Development, the Inter-American Development Bank, the International Monetary Fund, and institutions of the World Bank Group (International Bank for Reconstruction and Development and International Development Association). The World Bank External Debt is an internal system of the World Bank. Among its outputs is the International Debt Statistics database, from which the tables and data visualizations in this publication and the online database are produced.

Data on exports and imports (on a balance of payments basis), international reserves, current account balances, foreign direct investment on equity, portfolio equity flows, and primary income on foreign direct investment are drawn mainly from the International Monetary Fund, supplemented by UN Trade and Development reports and country data. Balance of payments data are presented according to the sixth edition of the International Monetary Fund's *Balance of Payments Manual*. Official aid flows come from data collected and published by the Development Assistance Committee of the Organisation for Economic Co-operation and Development. Short-term external debt data are as reported by debtor countries or are estimates based on the Bank for International Settlements quarterly series of commercial banks' claims on low- and middle-income countries. For some countries, estimates were prepared by pooling creditor and debtor information. Data on the gross national income of most low- and middle-income countries are collected from national statistical organizations or central banks by visiting and resident World Bank missions.

Every effort has been made to ensure the accuracy and completeness of the external debt statistics. Coverage has been improved through the efforts of the reporting agencies and close collaboration between the World Bank and its partners, the Commonwealth Secretariat and UN Trade and Development, which provide debt recording and reporting systems across the globe, as well as through the work of the World Bank missions, which visit member countries to gather data and to provide technical assistance on debt issues. Nevertheless, quality and coverage vary among debtors and may also vary for the same debtor from year to year. Data on long-term external debt reported by member countries are checked against, and supplemented by, data from several other sources. Among these sources are the statements and reports of several regional development banks, government lending agencies, and official government websites.

Source: World Bank Debtor Reporting System.
Note: Letters in parentheses indicate Debtor Reporting System reporters' status: (A) as reported, (P) preliminary, and (E) estimated. The status "as reported" indicates that the country was fully current in its reporting under the Debtor Reporting System and that World Bank staff are satisfied that the reported data give an adequate and fair representation of the country's total public debt. "Preliminary" data are based on reported or collected information; however, because of incompleteness or other reasons, an element of staff estimation is included. "Estimated" data indicate that countries are not current in their reporting and that a significant element of staff estimation has been necessary in producing the data tables.
a. For Bosnia and Herzegovina, total debt before 1999, excluding International Bank for Reconstruction and Development and International Monetary Fund obligations and short-term debt, is included under Serbia.
b. Data before 2006 include Montenegro.
c. Guyana's data are reported and included in this report because the country is eligible for International Development Association resources. However, because it is classified as a high-income country, its data are excluded from the regional aggregates.

Source: World Bank.
Note: Low-income countries are those with a GNI per capita of US$1,135 or less in 2024. Middle-income countries are those with a GNI per capita equal to or more than US$1,136 but equal to or less than US$13,935. Italicized countries are IDA-only countries as of July 1, 2025; IDA-only excludes blend and IBRD countries. Ethiopia has a temporary status of unclassified according to the FY2026 income classification, but for this publication it has been retained under its FY2025 status as a low-income country and is included in this report and the International Debt Statistics database. The World Bank still considers Ethiopia as an IDA-only country, so there is no change to the terms and conditions of Bank financing for the country. Guyana is classified as a high-income country as of July 1, 2025, so it does not appear in this table or in the low- and middle-income countries' aggregates; however, as an IDA-only country, its data are included in this report. República Bolivariana de Venezuela is unclassified according to the World Bank FY2026 income classification owing to a lack of available data; thus, it is not included in this report or the International Debt Statistics database. FY = fiscal year; GNI = gross national income; IBRD = International Bank for Reconstruction and Development; IDA = International Development Association.

Glossary

This list provides general descriptions, not precise legal definitions, of the terms commonly used in this report. However, the descriptions include legal and policy elements relevant to how these terms are understood and applied in practice.

Base year is the period against which quantities and prices of a given period are compared.

Bilateral currency swap line is an agreement between two central banks to exchange a cash flow in one currency against a cash flow in another currency according to predetermined terms and conditions.

Blue bond is a debt instrument issued by governments, development banks, or other entities to raise capital from impact investors to finance marine and ocean-based projects that yield positive environmental, economic, and climate benefits.

Bonds are debt instruments issued by public and publicly guaranteed or private debtors with durations of one year or longer. Bonds usually give the holder the unconditional right to fixed money income or to contractually determined, variable money income.

Central bank is a country's financial institution that exercises control over key aspects of the financial system. It carries out activities such as issuing currency, managing international reserves, transacting with the International Monetary Fund, and providing credit to deposit-taking corporations.

Commitments (of public and publicly guaranteed debt) constitute the total amount of new long-term loans to public sector borrowers or to borrowers with a public sector guarantee extended by official and private lenders and for which contracts were signed in the year specified.

Common Framework for debt treatment beyond the Debt Service Suspension Initiative is an initiative launched in 2022 and endorsed by the Group of Twenty, designed to support, in a structural manner, low-income countries with unsustainable debt.

Concessional debt conveys information about the borrower's receipt of aid from official lenders at concessional terms as defined by the World Bank, that is, loans with an original grant element of 35 percent or more. The World Bank classifies loans from major regional development banks—the African Development

Bank, Asian Development Bank, and Inter-American Development Bank—as concessional.

Debt buyback is the repurchase by a debtor of its own debt, either at a discount price or at par value. In the event of a buyback of long-term debt, the face value of the debt bought back will be recorded as a decline in stock outstanding of long-term debt, and the cash amount received by creditors will be recorded as a principal repayment.

Debt distress, as defined under the Debt Sustainability Framework, is caused by unsustainable debt, wherein a country is unable to fulfill its financial obligations and debt restructuring is required.

Debt-distressed is when a country's debt and debt service ratios significantly and persistently breach established thresholds, indicating an inability to meet its financial obligations. It is the most severe risk category in the International Monetary Fund–World Bank Debt Sustainability Framework (DSF) for low-income countries.

Debt-for-climate swaps are agreements that convert debts into commitments related to climate activities.

Debt-for-development swaps are agreements that convert debts into commitments related to a specific development goal, such as nature conservation, climate action, education, nutrition, or support for refugees.

Debt-for-equity swaps are agreements that convert debts into commitments related to equity investments.

Debt-for-nature swaps are agreements that convert debts into commitments related to conservation activities.

Debt restructurings are revisions to debt service obligations agreed on by creditors and debtors. Such agreements change the amount and timing of future principal and interest payments. Debt restructuring is a complex process that requires the agreement of domestic and foreign creditors and involves burden sharing between different parties (for example, between residents and banks in most restructurings of domestic debt).

Debt service is the sum of principal repayments and interest paid on total long-term debt (public and publicly guaranteed debt and private nonguaranteed debt).

Debt Service Suspension Initiative (DSSI) took effect on May 1, 2020, and allowed 73 eligible countries to apply for a temporary suspension of debt service payments owed to official bilateral creditors. The suspension period, originally set to end on December 31, 2020, was extended through December 2021.

Debt service-to-export ratio is the ratio of total debt service (principal repayments and interest payments) to the value of exports of goods and services and receipts of primary income from abroad.

Debt service-to-GNI ratio is the ratio of total debt service (principal repayments and interest payments) to gross national income (GNI).

Debt sustainability is the condition under which a country (or its government) does not, in the future, need to default or renegotiate or restructure its debt, or make implausibly large policy adjustments.

Debt swap (conversion) is an exchange of debt—typically at a discount—for a nondebt claim (such as equity) or for counterpart funds that can be used to finance a particular project or policy. In essence, public sector debt is extinguished and a nondebt liability created in a debt conversion.

Debt-to-export ratio is the ratio of outstanding external debt to the value of exports of goods and services and receipts of primary income from abroad.

Debt-to-GNI ratio is the ratio of outstanding external debt to gross national income (GNI).

Debt transparency results in readily available data on public debt, allowing governments to make informed decisions about macroeconomic policy and debt sustainability.

Disbursements are drawings during the year specified on loan commitments contracted by the borrower.

Disinflation is the slowdown or fall in the annual rate of inflation.

Eurobond is a type of bond that governments or corporations issue outside of their home country and is denominated in a currency different from that of the issuer. Typically, Eurobonds are long-term debt instruments and are commonly denominated in US dollars. They can also be denominated in other currencies such as the euro, pound, Japanese yen, and Swiss franc.

External debt flows are debt-related transactions during the year specified. They include disbursements, principal repayments, and interest payments.

External debt stocks comprise public and publicly guaranteed long-term external debt, private nonguaranteed long-term external debt, use of International Monetary Fund credit and special drawing rights allocation, and short-term external debt.

Fiscal sustainability refers to the future implications of current fiscal policies and, more precisely, to the question of whether the government can continue to pursue its set of budgetary policies without endangering its solvency.

Foreign direct investment refers to direct investment equity flows in the reporting economy. It is the sum of equity capital, reinvestment earnings, and other capital. Direct investment is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy. Ownership of 10 percent or more of the ordinary shares or voting stock is the criterion for determining the existence of a direct investment relationship.

Fragile and conflict-affected situations (FCS) are countries with high levels of institutional and social fragility, identified using indicators that measure the quality of policy and institutions, and manifestations of fragility, and/or are countries affected by violent conflict, identified using a threshold number of conflict-related deaths relative to the population.

The Group of Seven (G-7) is the collection of seven industrialized countries—Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States—that meets annually to discuss issues such as global economic governance, international security, and, most recently, artificial intelligence.

The Group of Twenty (G-20) is the collection of the world's largest economies—Argentina, Australia, Brazil, Canada, China, France, Germany, India, Indonesia, Italy, Japan, the Republic of Korea, Mexico, the Russian Federation, Saudi Arabia, South Africa, Türkiye, the United Kingdom, and the United States—along with the African Union and the European Union, established to discuss international economic and financial stability.

Grace period is the time between the date on which a loan is committed and the date on which the first principal payment is due. The information presented in the International Debt Statistics database is the average grace period on all public and publicly guaranteed debt committed during the specified period.

Grants are legally binding commitments that obligate a specific value of funds available for disbursement for which there is no payment requirement. They include debt forgiveness grants and grants from bilateral and multilateral agencies (such as the International Development Association).

Green bonds are bonds that finance green projects and provide investors with regular or fixed income payments.

Gross domestic product is the sum of gross value added by all resident producers in the economy, plus any product taxes and minus any subsidies not included in the value of the products.

Gross national income is the sum of value added by all resident producers, plus any product taxes (less subsidies) not included in the valuation of output, plus net receipts of primary income compensation of employees and property income from abroad. Yearly average exchange rates are used to convert gross national income from local currency to US dollars.

Heavily Indebted Poor Countries (HIPC) Initiative is a program of the World Bank and the International Monetary Fund to provide debt relief to qualifying countries with unsustainable debt burdens.

IDA-eligible countries are the countries that are eligible to receive International Development Association (IDA) resources. Eligibility for IDA support depends on a country's relative poverty, defined as gross national income per capita below an established threshold, which is updated annually.

Inflation is the rate of increase in prices over a given period in an economy.

Interest payments are the amounts of interest paid in foreign currency, goods, or services in the year specified.

Interest payment-to-GNI ratio is the ratio of interest payment to gross national income.

Interest rate is the interest rate applicable to a loan commitment as specified in the loan contract. The information presented in the International Debt Statistics database is the average interest on all public and publicly guaranteed debt committed during the specified period.

Long-term external debt is debt that has an original or extended maturity of more than one year and that is owed to nonresidents by residents of an economy and is repayable in currency, goods, or services.

Maturity is the date on which the final principal repayment on a loan is due. It is the sum of the grace and repayment periods. The information presented in the International Debt Statistics database is the average maturity on all public and publicly guaranteed debt committed during the specified period.

Monetary policy is used by central banks to manage economic fluctuations and achieve price stability, with low and stable inflation. Central banks conduct monetary policy by adjusting the supply of money, usually through buying or selling securities in the open market. When central banks lower interest rates, monetary policy is easing. When they raise interest rates, monetary policy is tightening.

Multilateral Debt Relief Initiative (MDRI) is a program of the World Bank, the International Monetary Fund, the Inter-American Development Bank, and the African Development Bank that provides additional debt relief to countries that have completed the Heavily Indebted Poor Countries Initiative process.

Multilateral official creditors are official agencies owned or governed by more than one country that provide loan financing. They include international financial institutions such as the World Bank, regional development banks, and other intergovernmental agencies.

Multilateral-to-external debt stock is the ratio of the stock of debt owed to multilateral creditors to total external debt.

Net debt flow is gross disbursements minus principal payments.

Net transfers on external debt are net flows minus interest payments during the year; negative transfers show net transfers made by the borrower to the creditor during the year.

Official creditor committee is a group formed to represent the collective interests of creditors during the debt restructuring or bankruptcy process of a debtor, typically a corporation or sovereign entity.

Official creditors are governments or other bilateral public entities (such as export-import agencies or development agencies) and multilateral financial institutions (such as the World Bank and regional development banks).

Paris Club is an informal group of official creditors whose role is to find coordinated and sustainable solutions to the payment difficulties experienced by debtor countries. Paris Club creditors provide appropriate debt treatment as debtor countries undertake reforms to stabilize and restore their macroeconomic and financial situations.

Principal repayments are the amounts of principal (amortization) paid in currency, goods, or services in the year specified with respect to long-term external debt.

Private creditors are bondholders, commercial banks, and other trade-related lenders.

Private nonguaranteed debt is debt owed by private sector borrowers to external creditors on loans that do not benefit from a public sector guarantee by the debtor country.

Public and publicly guaranteed debt comprises public debt (an external obligation of a public debtor, such as the general government or agency, the central bank, a political subdivision or agency, or an autonomous public body) and publicly guaranteed external debt (an external obligation of a private debtor that is guaranteed for repayment by a public entity).

Public debt is an external obligation of a public debtor, including all levels of government, the central bank, state-owned enterprises, public corporations, development banks, and any other autonomous public bodies of government.

Public domestic debt comprises debt liabilities owed by public sector entities to other resident units of the same economy.

SDR allocations are reserve-related liabilities, distributed to member countries in proportion to their quota shares at the International Monetary Fund. The SDR (special drawing right) allocations are included in the gross external debt position and classified as long-term special drawing rights.

Short-term external debt has an original maturity of one year or less. Available data permit no distinctions among public, publicly guaranteed, and private nonguaranteed short-term external debt.

State-owned enterprise is a corporate entity recognized by law that is at least partially owned by the government.

Treasury bonds are long-term debt securities with a maturity period of 20 or 30 years. They are considered low-risk and are generally free of risk when held until maturity.

Variable-rate loans are loans for which the interest fluctuates according to changes in market interest rates.

For more than five decades, the World Bank's premier annual publication on debt, now titled the *International Debt Report* (IDR), along with the associated International Debt Statistics (IDS) database, has helped shape policies in development finance by sharing timely and comprehensive external debt data and analysis with the international community. Drawing on data collected through the World Bank's Debtor Reporting System, this publication has kept pace with evolving borrowing patterns and new lending instruments, measured the impact of initiatives to relieve debt burdens, and promoted best practices in debt recording and reporting.

Each year the report presents an analysis of evolving trends in external debt stocks and flows of low- and middle-income countries (LMICs), as well as issues and challenges for development finance. The IDS database provides comprehensive information on external debt stocks and flows of public and private borrowers in LMICs (by borrower and creditor), the terms on which external loans are contracted, current and future debt service, and debt indicators in relation to key economic variables.

IDR 2025 encompasses

- Analysis of external debt stocks and flows for 2014–24;
- Debt dynamics: policy implications and outlook;
- Update on the debt transparency agenda; and
- One-page summaries per country, plus global, regional, and income-group aggregates showing debt stocks and flows, relevant debt indicators, and metadata for 6 years (2010 and 2020–24).

For more information on *International Debt Report 2025* and related products, please visit the World Bank's Debt Statistics website at www.worldbank.org/debtstatistics.
